

Even Joey Thinks Our Engineering Management Solution Is Amazing

CDC Praxa's fully integrated
Project Services & Management
Platform for the Engineering
Industry

Joey is not alone when it comes to trusting CDC Praxa to deliver an amazing engineering project services solution. CDC Praxa is one of Australia's leading IT integrators for the engineering industry with customers including InMotion Engineering, Masterarc Industries, Pryde Measurements, Tectronica Australia and Samuel Leighton & Associates.

Built on the proven foundation of Microsoft Dynamics technology, CDC Praxa's fully integrated Project Services & Management Platform for the Engineering Industry is a complete Engineering Management Solution that optimises your engineering projects, processes and people around your business needs.

It is designed to better manage your projects, take your products to market faster, meet compliance and reporting requirements, enhance your customer relationship, increase your operation efficiency and productivity and reduce your operation cost.

CDC Praxa is an expert in giving engineering organisation the flexibility of a tailored application solution to meet their specific business needs, making sure every aspect of your projects and business can be effectively tracked & managed for a better outcome.

As a leading Australian integrator of Enterprise Resource Planning, CRM, Project Management and Business Intelligence solutions, we aim to be amazing. So if you are ready to join Joey and move to a whole new level of integration that maximises your existing corporate systems, projects, plans, people and processes then please give us a call.

ABOUT CDC SOFTWARE AUSTRALIA | PRAXA LTD

CDC Praxa is one of Australia's leading and growing IT professional services solution providers. Operating since 1982, CDC Praxa has grown from 4 dedicated staff to over 250 specialists & consultants Australia-wide. With offices in Sydney, Melbourne, Brisbane and Adelaide, CDC Praxa delivers integrated end-to-end solutions that help organisations and Governments to align, customise and maximise their business operations.

A consulting services division of CDC Corporation Group, CDC Praxa is recognised industry-wide and has a solid reputation for providing business critical information technology management and consulting.

CDC Praxa is a **Quality Endorsed Company** having attained **ISO 9001** status confirming our commitment to the provision of quality services and to the continuous improvement of our processes. One of CDC Praxa's standout successes is our ability to combine the skills and experience of our dedicated staff with documented policies, procedures and methodology. CDC Praxa is also an endorsed federal government supplier and is on several Government Panel Contracts for NSW and VIC including the ICT Services Approved Supplier Panel Contract 2020.

CDC Praxa's Project Services & Management Platform

Job Costs & Estimation

Regardless of how complex a project is, Job Cost keeps the focus on the projects' profitability by ensuring that everyone has accurate, up-to-date information, from entering time and expenses, to billing clients, managing subcontractors and more, all accessible anytime and anywhere by leveraging the Internet. Designed to adapt to rapidly changing business and market conditions, Job Cost enables project-based businesses and project managers to track actual and budget activity by project, phase, or in further detail and easily track revenue, expenses and profitability. The system features business alerts to proactively notify project managers of due dates and contract requirements. Job Cost facilitates simplified tracking of critical information such as: Project change-orders; Subcontracts; Subcontract change-orders; Forecasts; Forecast revisions; committed purchase orders and other events associated with contracts.

Exceptional Customer Visibility and Delivery

Integrate with Microsoft Dynamics CRM to satisfy the needs of engineering organisation, CDC Praxa's fully integrated Project Services & Management Platform gives engineering organisations exceptional visibility and access to their customer-centric information as well as all its project and business management attributes, deliverables and financial information across the organisation. It links and gives you customer information when and where you need it to deliver better customer service and better organisation efficiency.

Report Management and Complete Access to Information

This provides the ability to view projects from the very highest level down to an individual transaction. It enables project managers to quickly and easily access specific job information which eliminates timely searches, creates greater efficiencies and allows project managers to make business decisions based on real-time information, improving control and the ultimate outcome of a job. User-defined security settings allow you to control the information your staff can access and the actions they can take within a project (forecast revisions, change orders, payroll, etc.). Portal access effectively extends the application to the field via the Internet. The ability to access this information from your desk, from your laptop or handheld device in the field or via Web browser at a public Internet station means you and your team have the information you need when you need it.

Asset Management

Collecting and managing an asset inventory and tracking the financial and operational lifecycle of any kind of asset cannot be easier. Our solution provides one platform to accomplish the costing, tracking, budget to actual, inventory management, purchasing, maintenance planning and recurring work orders so integration is never an issue. Asset reliability, utilisation, warranty and service are inherent components of the CDC Praxa's fully integrated Project Services & Management Platform, which allows engineering companies to improve efficiencies, reduce administrative costs and optimise assets. This component allows you to plan for, build, operate, maintain and decommission assets; define strategies to meet short- and long-term goals for maintaining assets; facilitate decision making including costs and benefits of repair vs. replace options; integrate information to other key enterprise solutions such as your content management, ERP and CRM; centrally track all work requests and work orders; comply with regulatory requirements; and satisfy management requirements with in depth reports.

Contractor Management

Effectively managing subcontractor agreements can be a daunting task and unexpected subcontractor costs can destroy margins and erode working capital. When it comes to subcontractors, you will have a better understanding of their overall committed costs and the cost to complete. You can effectively manage a high volume of vendors and subcontractors and track critical information including insurance and worker's compensation expiration dates, draw requests, retention percents and certificate expirations; change-order status tracking; drawings, submittals, documents and other paperwork associated with contracts; payment control when paid by the customer (pay-when-paid). You can also track contract and subcontract paperwork for multiple projects. Documents, such as change orders, permits, proof of insurance, performance bonds, certified payroll reports and other contract-related information, are all readily accessible.

Time and Document Management

Supervisors and project managers can easily monitor and analyse ongoing labour costs. Access to this data allows project managers to make informed and timely labour-related business decisions, positively impacting the direction and ultimate outcome of a job. Upon approval, labour costs are simultaneously posted to billing and payroll functions, resulting in a faster billing cycle and improved cash flow. You can capture, validate, track, review, approve and post expenses to various projects or service calls. The document management module provides project managers the ability to create and track common project documents and allow them to track the submittal and approval of projects documents, helping them understand the potential impact on a project's schedule. Project managers receive reminders for overdue tasks, drawings, submittals or other actions.

Service & Contract Management

This component manages the operational and financial aspects of a contractual relationship. Profitability is tracked on a per-contract basis by actual, estimated, and forecasted costs in user-defined cost categories. Various contract models are supported, including full coverage agreements, preventive maintenance planning, and warranty agreements. The application tracks the skill set, parts and tools required to complete a preventative maintenance task.

Simplifying Project Management

Project Management Portal allows you to manage projects from one central location. Custom work flows keep project managers updated on project status, tasks they need to complete and dates missed by others, allowing you to identify an issue before it becomes a problem. Project Management Portal provides the tools you need to create and track common project documents including transmittals; submittals; project drawings; project plan archives; daily job forms; safety meeting minutes; project meeting minutes; project status memos; project images; RFIs; change orders; project issues and KPIs.

Outstanding Reporting, Analysis and More

The standard CDC Praxa's fully integrated Project Services & Management Platform for the Engineering Industry gives you all the reports you need to understand how your project, financial and business are going but with an added component of business intelligence, CDC Praxa's Engineering Management Solution becomes truly amazing. By utilising a set of monitoring and analysis tools that bring together critical information from different sources like your project, development, customer information, financials, sales and business strategy, CDC Praxa's BI solution delivers a reliable performance management measure through effective data analysis to empower better decision making, forecast and planning. This powerful, flexible, and central BI solution reduces reliance on unsecured spreadsheets, shortens reporting cycles, and enables staff in different departments and locations to collaborate easily through the Web. All this - key performance indicators, scorecards, management reports, web-based dashboards and ad hoc analyses - without IT support to build on your investment for future growth.
